Thematic encyclopedia designed for learning through play. It contains double-sided infographic cards, presented as loose-leaf pages in the book, making them ideal for interactive use. Their categorized information facilitates understanding through reading, comparison, and deduction. In this collection, you will learn all about our star, its planets, and its most important moons and asteroids. You will embark on a journey through the solar system and discover fascinating details about the origin, composition, and mythological connections of its celestial bodies. Furthermore, you can play by comparing their fun facts and enjoy three interactive games to share with family and friends. Challenge your companions and become an expert! Get them now in their new Luminias Clap! presentation, complete with a case and magnetic closure, ideal for storing and protecting your collection. Celestial Bodies Included: Sun, Mercury, Venus, Earth, Moon, Mars, Phobos, Deimos, Vesta, Ida, Ceres, Jupiter, Io, Europa, Ganymede, Callisto, Saturn, Mimas, Enceladus, Tethys, Rhea, Titan, Iapetus, Uranus, Miranda, Neptune, Triton, Pluto, Charon, Haumea, Makemake, and Eris.
